Magnetic Chalk belt-clip assembly

First, carefully use a sharp tool to remove any imperfections in the area for the magnets. (be careful not to remove too much material then the magnets will sit loose) you want the magnets to fit tight and snug!

Next, place the magnet with appropriate force into the holes in the belt clip part first and press them in to become flush with the surface.

After that, place two more magnets on top of the other magnets to ensure correct magnet orientation (so magnets attract instead of repelling)

Then press the TPY chalk holder part onto those magnets and press firmly so that magnets become flush with the TPU Part.
